Governed resolution decision chain for covered-resource terminology queries

Incoming query
Always enters Level A

Level A
Exact main-name match
Ordered deterministic gate 1

no eligib
record

Level B
Verified alias match
Ordered deterministic gate 2

no eligib
record

Level C
Normalized deterministic match
Ordered deterministic gate 3

no determin
match

Level D
Fuzzy retrieval
CANDIDATE SUPPORT ONLY

unique eligible record

unique eligible record

unique eligible record

Factual-output boundary — AUTO-RESOLVE
Only successful unique Level A, B, or C paths may enter
Latin nomenclature copied only from an immutable KB record • provenance linked

Multiple eligible records at A / B / C
Deterministic match exists, but binding is not unique

Nonbinding candidate support
Never directly authorizes factual output
Candidates may support clarification or review

ambiguous

ambiguous candidates

no supported candidate

Level E — AMBIGUOUS
ABSTAIN / HUMAN REVIEW
Multiple eligible records or unresolved ambiguity

Level F — UNSUPPORTED
ABSTAIN / HUMAN REVIEW
No supported record after candidate assessment

Separate review / abstention output path
Levels D, E, and F never connect to the factual-output boundary

LLM role boundary
Query reformulation • candidate explanation • clarification — **NOT Latin-name factual generation**
