Covered-resource benchmark as a selective-resolution operating point

A. System-level disposition

Total queries: 1,855

1,403 automatic resolutions

452
review / abstention

3 unsafe automatic resolutions

Among 1,403 automatic resolutions

1,400 correct automatic resolutions

Automatic coverage first; automatic-resolution correctness is conditional on automatic resolution.

B. Group-level operating behavior

B1

Exact main names

600 / 600
automatic coverage

600 / 600 correct

review / abstention 0 • unsafe 0

B2

Verified aliases

600 / 600
automatic coverage

600 / 600 correct

review / abstention 0 • unsafe 0

B3

Controlled perturbations

203 / 600
automatic coverage

200 correct • 3 unsafe

review / abstention 397

B4

Ambiguous / unsupported

0 / 55
automatic coverage

55 / 55 abstained

unsafe 0

B3 candidate retrieval: Top-1 449/600 • Top-20 527/600

Covered-resource behavior ≠ unseen generalization

Selective automation combines automatic coverage, automatic-resolution correctness, review / abstention, unsafe automatic resolution, and provenance.
